Continuing Education Courses Available for Design and Build Professionals in Central Texas

*Local electronic systems professional deliver training; members of
participating organizations earn continuing education units*

AUSTIN, TX, JULY 1, 2009: Educating architects, building designers, builders, and interior designers on ways to increase their business through home technology is top priority for AV Design Associates. Recently, David Jasak, of AV Design Associates, received the Registered Outreach Instructor (ROI) designation from the Custom Electronic Design & Installation Association (CEDIA) enabling him to deliver 11 courses approved for continuing education credit through the American Institute of Architects (AIA), the American Institute of Building Design (AIBD) and Interior Design Continuing Education Council (IDCEC)-governed Interior Designer associations.

These ROI courses are part of CEDIA's industry outreach efforts, designed to strengthen collaboration between electronic systems professionals and the design and build industry. As technology

~ MORE ~

continues to grow and change at a rapid pace, the courses that Mr. Jasak offers help design and build professionals better understand the capabilities of residential electronic systems. The courses are provided at no charge by AV Design Associates.

"Becoming a Registered Outreach Instructor for a national organization such as CEDIA is a real honor" says Mr. Jasak of his most recent accomplishment. He also adds, "My goal is to help educate the Central Texas design and build professionals with fun, technology driven classes."

Local chapters of industry partner associations, such as AIA, AIBD, and ASID are encouraged to contact AV Design Associates to take advantage of this free education. Courses cover such topics as hiding technology, planning for residential electronics systems, lighting control, and home theater design.

*About **AV Design Associates***

AV Design Associates is an Austin based systems integration specialty firm providing design, engineering, consulting and programming to the residential and commercial building industry. Their designs include, but are not limited to, dedicated home theaters, single room entertainment systems, audio and video distribution, lighting control, boardrooms, surveillance camera

systems and other low-voltage controlled sub-systems utilized in today's construction market.

David Jasak is a seasoned AV veteran of over 24 years and is a CEDIA Certified Professional Designer. He is also a CEDIA Registered Outreach Instructor for continuing education to design build professionals.
